Great News!

SUNAPEE WATER SYSTEM IS IN COMPLIANCE WITH THE TOTAL TRIHALOMETHANES STANDARD

Sunapee's Drinking Water No Longer Quantifies as Containing High Levels of Disinfection By-Products

The Sunapee water system had been in violation of drinking water standards for total Trihalomethanes (TTHMs) for all of 2018 and 2019 but as of the second quarter of 2020 the system is no longer in violation!

We are required to monitor your drinking water for specific contaminants on a regular basis. The Locational Running Annual Average (LRAA) is determined by averaging all the samples collected at a particular monitoring location during the previous four calendar quarters. **The LRAA standard for Total TTHM is 0.080 mg/L. The individual result for the 4th quarter of 2019 was a .064 mg/L for TTHM, the result for the 1st quarter of 2020 was .053 mg/L, and the 2nd quarter of 2020 was .0605 and when calculating the LRAA the Sunapee system is back in compliance with maximum contaminant level for TTHM and hopefully it will continue the downward trend in the third quarter as well.**

The LRAA of TTHM was well below the MCL of 0.080 mg/L at our system's sampling.

The LRAA was 0.06635 mg/L

The Sunapee Water & Sewer Commission is still working with their consultant to install an Ultraviolet Disinfection System at the Sunapee Slow Sand Filter Plant as this system was been chosen as the best alternative to help curb the formation of TTHM's.

For more information, please contact David Bailey, Superintendent of The Sunapee Water and Sewer Department at 603-763-2115 or P.O. Box 347, Sunapee, NH 03782

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (for example, people in apartments, nursing homes, schools and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.
